

K-Shaker Vibrating Roller

K-SHAKER DISCS clamp on to a standard 114 mm diameter return conveyor roller. The vibration caused by the discs can help to “knockoff” carry back in a convenient location for cleanup. The ideal installation is directly over a stockpile, bin or vibrating screen.

The discs are supplied with clamp separately, or as a roller assembly. The vibrating roller will work in either direction, and is not affected by damaged belts with mechanical fasteners.

They are effective at medium belt speeds and do not require any further attention after installation. The polyurethane disc is durable and its unique shape and hardness ensure continuous belt contact.

- Easy to Fit
- Cost Effective
- Maintenance Free
- Suitable for all Belt Widths
