

BULK MATERIALS HANDLING SOLUTIONS
MADE BETTER

K-Return Rubber Disc Idlers

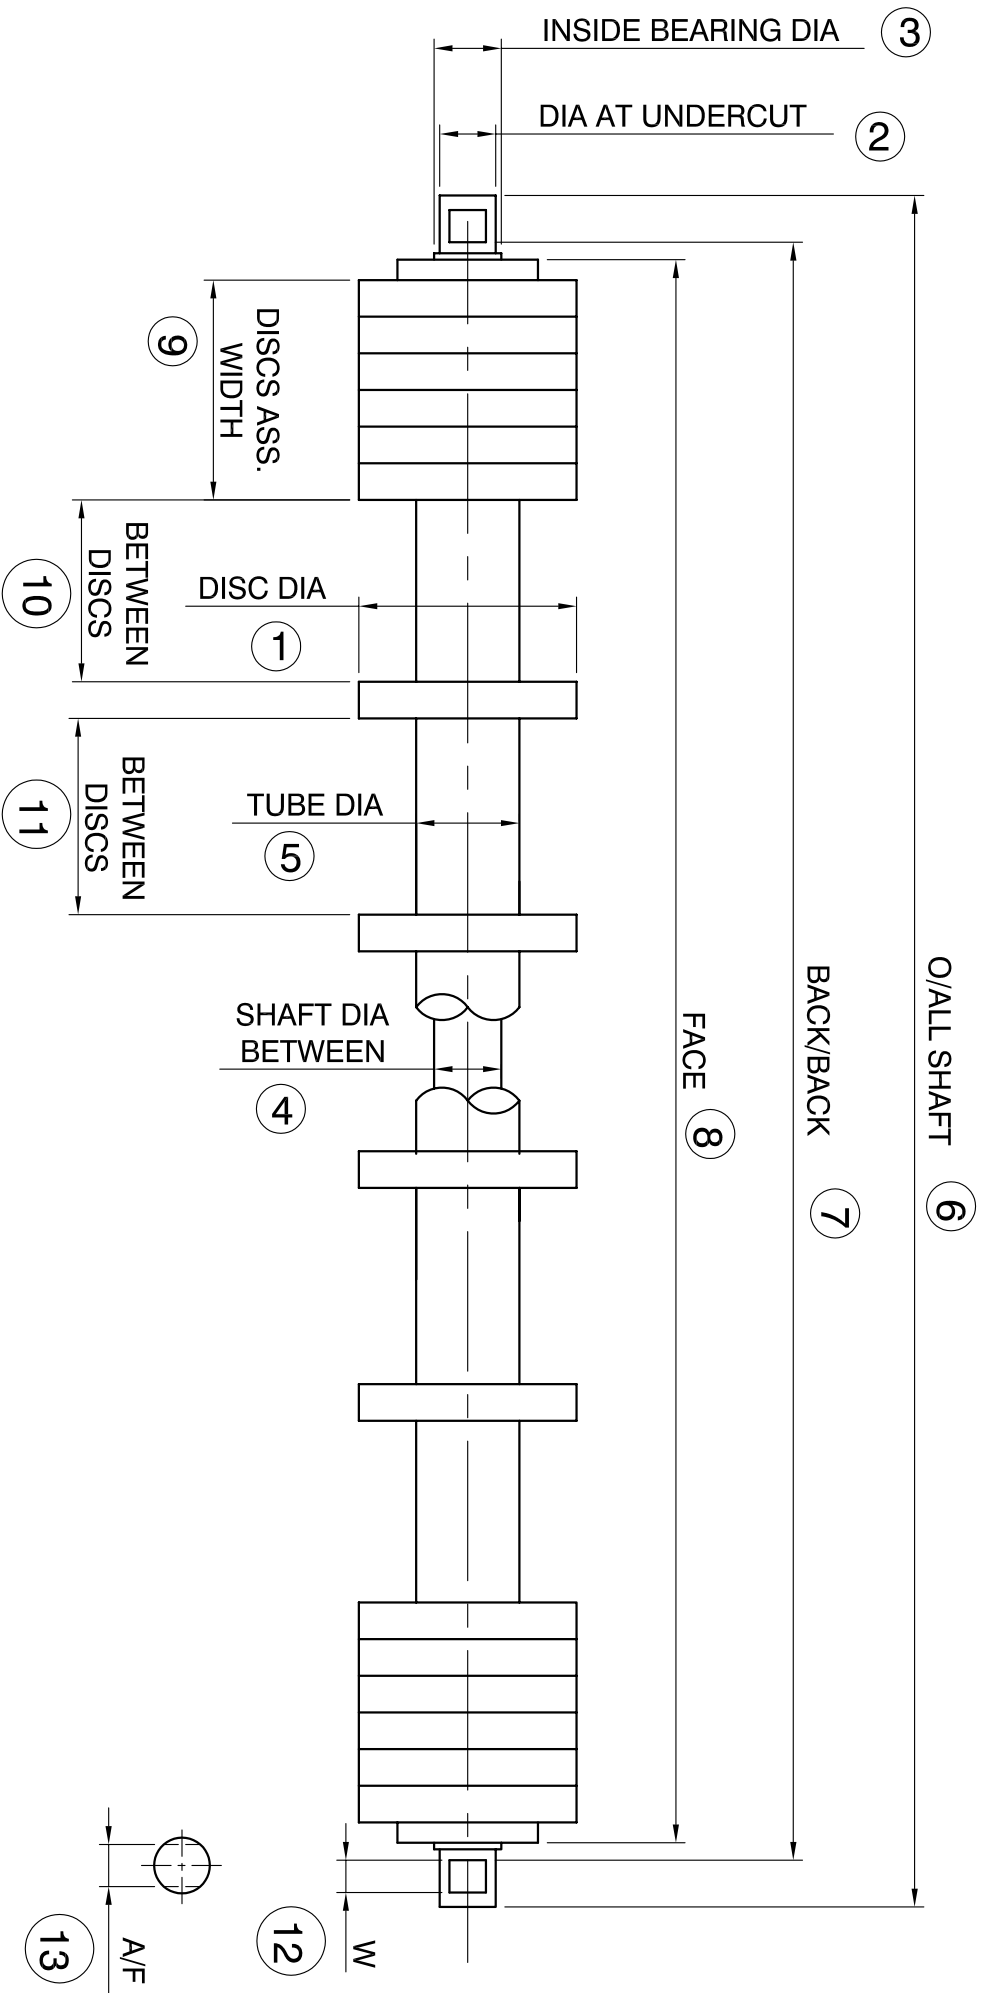

For use in wet, sticky or abrasive applications where the material conveyed can stick to the belt surface and then be deposited on the roller surface therefore changing the roller diameter to an irregular and changing shape. This being a major cause of belt mis-tracking.

K-Return Rubber Disc Idlers with spaced rubber discs contribute to eliminating roller build up by breaking up the material which is normally in the center of the belt. The discs which are bunched together at the ends support and protect the belt edges. Also allowing for limited belt drift.
