

BULK MATERIALS HANDLING SOLUTIONS
MADE BETTER

K-Fold-n-Seal Skirting System *Incorporating K-Superskirt Engineered Polyurethane*

Primary & Secondary Dust Control Seal

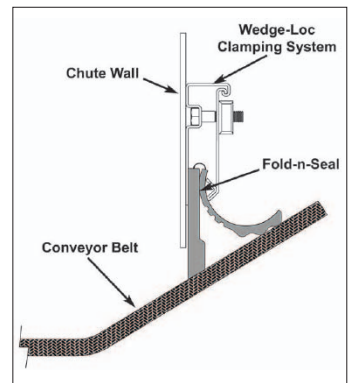

K-Fold-N-Seal is a performance polyurethane multi-purpose conveyor skirting solution for all belt conveyor applications. It will outlast rubber and protect your belts surface.

K-Fold-N-Seal's multi-purpose configuration contains material and dust at the same time. Made from high performance low friction polyurethane it has 60% less friction than rubber and is field proven to outlast rubber by 8 to 10 times. Polyurethane is non porous and will not collect fines which can cause belt damage.

The system will retro-fit onto most existing skirting clamps without further modification.

The primary seal is 19mm thick used to contain the conveyed material with the flexible secondary seal used to contain the dust.

- Suitable for all belt widths and trough angles.
- Field tested with 8 -10 times the wear life over quality rubber.
- 60% less coefficient of friction than rubber.
- More energy efficient than rubber.
- Retro-fits to existing clamping systems.

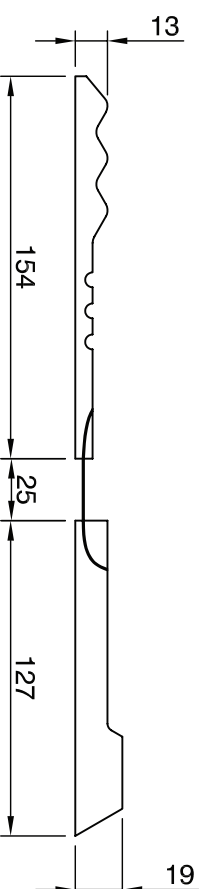

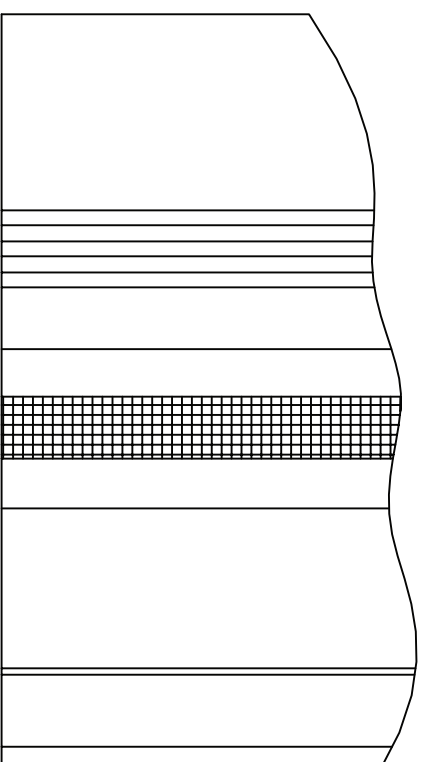

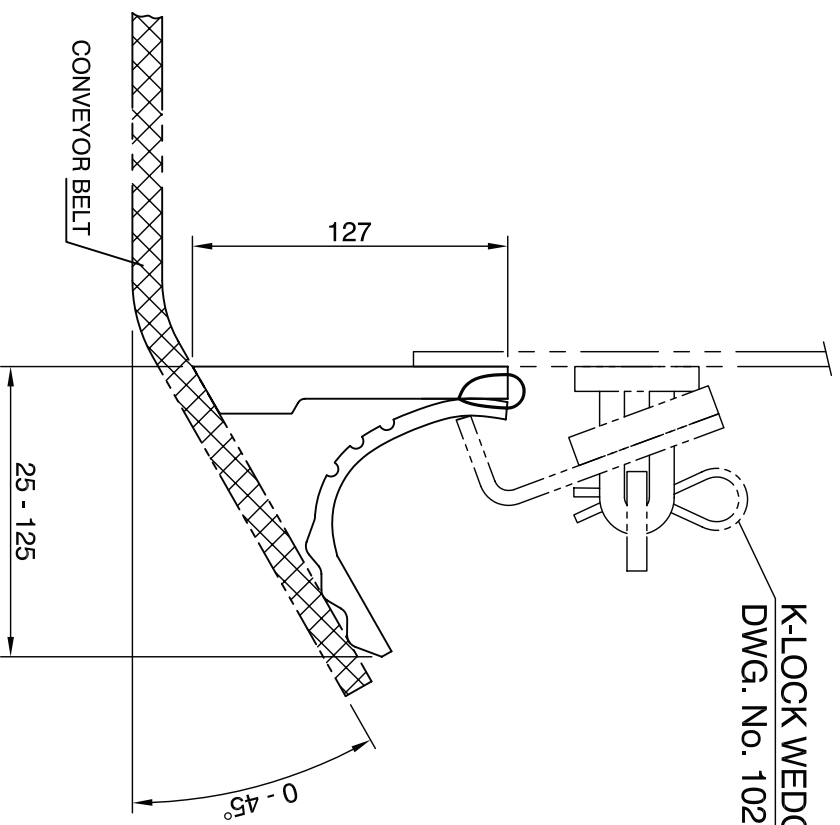

Less Friction + Less Wear = Longer Life
